Trends show that the use of mobile communication devices in construction work will increase in the coming years.

MIOSHA APPROVED TRAINING MATERIALS were developed under an MIOSHA CET training grant and designed for the construction industry.

This online training is for construction industry including but not limited to workers, site superintendents, safety managers and employers who have not received silica safety training based on New MIOSHA Silica Standard.

While providing an opportunity to construction trades to receive training and retraining on an important topic, we are testing the effectiveness of the delivery system.

By participating in this self-paced training, you will experience a common method in the near future of training delivery to workers in a just-in-time mode in the field.
