

Leidal & Hart Mason Contractors—Delivering Creative, Innovative and Effective Solutions

Leidal & Hart Mason Contractors, Inc., a masonry systems specialist since 1957, has built its reputation on successfully meeting the challenges of the toughest masonry projects. With masonry as their core capability and service, Leidal & Hart’s team comprises highly skilled and trained masonry crews and is recognized as an expert in masonry systems, trends and innovative technologies. Their history of successful masonry projects includes government, corporate, manufacturing, industrial, education, healthcare, religious, retail, parking structures, stadiums, arenas and special events. The company maintains multiple full-service branch offices—in Livonia, Michigan; Columbus, Ohio; and South Bend, Indiana.

A member of the MIM for more than 30 years, Leidal & Hart approaches each project with innovation in mind—it’s in their DNA. They are always thinking of ways to save money and work faster—all while delivering the best quality product possible. “Our customers expect to receive the most creative, innovative and effective solutions possible, within budget and on schedule,” said Brad Maurer, vice president, Leidal & Hart.

Brad values the relationships he’s built over the years as a MIM member. “One of the greatest benefits of our MIM membership is having so many like-minded people who are constantly trying to push our industry forward. Everyone involved is always willing to listen and is eager to help if a situation should require it.”

When asked about his favorite thing about our industry, Brad didn’t hesitate to say it’s the people. “We all share a common concept that masonry is the best system there is,” said Brad, “and we get to find creative ways to prove it to the people who may not understand that yet. Most of us either come from the field or have a long family history in the trade (or both) and have seen the benefits of it throughout history. We share a common bond in that and that is what aligns us to continue to challenge conventional thinking to push masonry forward.”

Brad’s advice for new members? Be safe, never sacrifice quality and remember that you represent the industry and its systems—not just yourself—when working with the A/E/C community.
