

William A. Kibbe & Associates is Dedicated to Meeting Customers' Ever-Changing Needs

William A. Kibbe & Associates is an employee-owned ISO 9001 registered engineering and architectural design firm headquartered in Saginaw, Michigan, with additional locations in Grand Rapids, Lansing and Traverse City.

Founded in 1981, Kibbe provides architectural services, structural, civil, mechanical and electrical engineering design. The company's strong tradition of expanding capabilities to better serve its clients has prompted its growth from a structural-based consulting firm to a multi-discipline design organization. Kibbe continues its dedication to remaining progressive in its efforts to utilize the latest technologies and advancements to meet its ever-changing customer needs.

Kibbe's custom in-house A/E design services allow them to provide superior, personalized communication and control over all aspects of each project. Their professional design services range from renovations to new construction; process and product development to building investigations and analysis; and small and relatively simple assignments to enormous and complex projects.

"We are committed to developing positive, enduring relationships built on trust, respect, and collaboration," said company president Greg Bator. "Our innovative use of BIM design software has made us a recognized leader for clients seeking flexibility, increased collaboration, better cost control, and superior quality and performance for their buildings."

Kibbe, a MIM member for more than 40 years, appreciates the resources and support the MIM provides. "A tremendous value to members while providing a connection to fellow A/E/C partners who share a unique appreciation for masonry," said Bator. "We commend MIM's advocacy to better understand masonry products and how proper design can achieve maximum durability and customer satisfaction."

Bator suggested those new to the MIM or to the industry take advantage of the knowledge and best practices promoted through the MIM. He added, "The MIM is a great resource for professional development, typical details, notes, specifications and software for concrete masonry and brick. Over the years Kibbe has benefitted from priceless troubleshooting advice and design guidance from MIM."

As a multi-disciplinary A/E design firm, the Kibbe team is proud of the positive impact of their work on community growth through its use of versatile, eco-friendly, durable and handsome masonry materials that stands the test of time.
